---

This product has been adjusted specifically for use in the region to which it was originally shipped. If the product is used outside the region, it may not operate as specified in the specifications.

---

This product may not be covered by warranty for uses other than those described in this manual.

---

The specifications noted in this manual are only applicable when the following are used:

---

It takes about 30 minutes for the performance of electrical parts to stabilize. Please wait 30 minutes or more after the monitor power has been turned on, and then adjust the monitor.

---

Monitors should be set to a lower brightness to reduce changes in luminosity caused by long-term use and maintain a stable display.

---

When the screen image is changed after displaying the same image for extended periods of time, an afterimage may appear. Use the screen saver or power save function to avoid displaying the same image for extended periods of time.

---

Periodic cleaning is recommended to keep the monitor looking new and to prolong its operation lifetime (refer to [“Cleaning” \(page 4\)](#)).

---

The LCD panel is manufactured using high-precision technology. Although, missing pixels or lit pixels may appear on the LCD panel, this is not a malfunction. Percentage of effective dots: 99.9994% or higher.

---

The backlight of the LCD panel has a fixed lifetime. When the screen becomes dark or begins to flicker, please contact your local EIZO representative.

---

Do not press on the panel or edge of the frame strongly, as this may result in display malfunctions, such as interference patterns, etc. If pressure is continually applied to the panel, it may deteriorate or damage your panel. (If the pressure marks remain on the panel, leave the monitor with a black or white screen. The symptom may disappear.)

---

# Cleaning

---

## **Attention**

- Chemicals such as alcohol and antiseptic solution may cause gloss variation, tarnishing, and fading of the cabinet or panel, and also quality deterioration of the image.
  - Never use any thinner, benzene, wax, and abrasive cleaner, which may damage the cabinet or panel.
- 

If necessary, the stains on the cabinet and panel surface can be removed by moistening part of a soft cloth with water.

# To use the monitor comfortably

---

- An excessively dark or bright screen may affect your eyes. Adjust the brightness of the monitor according to the environmental conditions.
- Staring at the monitor for a long time tires your eyes. Take a 10-minute rest every hour.
- If you feel any unusual sensations such as discomfort or fatigue while 3D images are displayed, stop using the monitor and take a break. Then, check the settings of the monitor and PC. If the problem still remains, stop using the monitor.

- 

## ● Adjusting the temperature

The color temperature can be adjusted.

The color temperature is normally used to express the hue of “White” and/or “Black” by a numerical value. The value is expressed in degrees “K” (Kelvin).

The screen becomes reddish at a low color temperature, and bluish at a high color temperature, like the flame temperature. The gain preset values are set for each color temperature setting value.

  - When gain is changed, the color temperature is changed to “User”.
-

## ● Adjusting Gamma

Gamma can be adjusted. The brightness of the monitor varies depending on the input signal, however, the variation rate is not proportional to the input signal. To keep the balance between the input signal and the brightness of the monitor is called as “Gamma correction”.

### **Setting Range**

1.6-2.7, EPD

### **Procedure**

1. Choose “Color” from the Adjustment menu, and press ENTER.
2. Choose “Gamma” from “Color”, and press ENTER.

1. Choose “Color” from the Adjustment menu, and press ENTER.
2. Choose “Advanced Settings” from “Color”, and press ENTER.
3. Choose “Outline Enhancer”, and press ENTER.
4. Select the display status in the range from -3 to 3 (soft to sharp) with ▲ or ▼ as desired.
5. Press ENTER to exit.

## ● Reducing motion blur “Blur Reduction”

Motion blur occurs when the eye recognizes liquid crystal transitions which comes from changing screens (frames).

When “Blur Reduction” is set to “On”, the backlight flickers in sync with liquid crystal transition\*1 so the change cannot be seen, thereby achieving clear images with less blur. (Default setting: On)

\*1 This monitor converts 120 Hz input signals into 240 Hz within the panel, and doubles the refresh rate to draw two images per frame. By applying a voltage higher than the input signal to speed up response (overdrive) for the first image, and then drawing the second image with the original input signal, the liquid crystals are stabilized. The “Blur Reduction” function turns on the backlight only for the stable duration of the second image, and off for other durations.

### **Procedure**

2. Choose “Advanced Settings” from “Color”, and press ENTER.
3. Choose “Blur Reduction”, and press ENTER.

  - The maximum brightness of the screen changes depending on the setting of “Blur Reduction”.
    - On: 350 cd/m<sup>2</sup> (typ.)
    - Off: 450 cd/m<sup>2</sup> (typ.)
  - When Color mode is “Paper”, “Blur Reduction” is fixed at “Off”.
-

# Chapter 7 Glossary

## DisplayPort

DisplayPort is a next-generation digital AV interface that allows connection of the PC, audio, imaging devices, etc. to the monitor. One cable can transfer sound with images.

## DVI (Digital Visual Interface)

DVI is a digital interface standard. DVI allows direct transmission of the PC's digital data without loss. This adopts the TMDS transmission system and DVI connectors. There are two types of DVI connectors. One is a DVI-D connector for digital signal input only. The other is a DVI-I connector for both digital and analog signal inputs.

## DVI DMPM (DVI Digital Monitor Power Management)

DVI DMPM is a digital interface power saving function. The "Monitor ON (operating mode)" and "Active Off (power saving mode)" are indispensable for DVI DMPM as the monitor's power mode.

## EPD (Equal Probability of Detection)

A gamma characteristic adjusted so the human eye can recognize the brightness difference of a single gradation level. The brightness for each input gradation is calculated. This improves visibility of dark areas, such as building shadows, in satellite or aerial photographs.

This gamma characteristic is defined by the National Geospatial Intelligence Agency.

## Gain

This is used to adjust each color parameter for red, green and blue. An LCD monitor displays the color by the light passing through the panel color filter. Red, green and blue are the three primary colors. All the colors on the screen are displayed by combining these three colors. The color tone can be changed by adjusting the light intensity (volume) passing through each color's filter.

## Gamma

Generally, the monitor brightness varies nonlinearly with the input signal level, which is called "Gamma Characteristic". A small gamma value produces a low-contrast image, while a large gamma value produces a highcontrast image.

## HDCP (High-bandwidth Digital Content Protection)

Digital signal coding system developed to copy-protect the digital contents, such as video, music, etc. This helps to transmit the digital contents safely by coding the digital contents sent via the DVI or HDMI connector on the output side and decoding them on the input side.

Any digital contents cannot be reproduced if both of the equipments on the output and input sides are not applicable to HDCP system.

## **Overdrive**

This technology enhances response speed by increasing the potential difference at the time of motion of liquid-crystal pixels, and it is used for liquid-crystal TV sets and others in general. It provides clear-cut three-dimensional display with little afterimage, by improving response speed of the intermediate graduation range that frequently appears in moving images.

## **Resolution**

The LCD panel consists of numerous pixels of specified size, which are illuminated to form images. This monitor consists of horizontal 1920 pixels and 1080 vertical pixels. At a resolution of  $1920 \times 1080$ , all pixels are illuminated as a full screen (1:1).

## **Temperature**

Color temperature is a method to measure the white color tone, generally indicated in degrees Kelvin. The screen becomes reddish at a low temperature, and bluish at a high temperature, like the flame temperature.

5000 K: Slightly reddish white

6500 K: White referred to as daylight-balanced color

9300 K: Slightly bluish white

## **TMD5 (Transition Minimized Differential Signaling)**

A signal transmission system for digital interface.
